Dinosaur Name

Length (m)

Period

Dinosaur Name	Length (m)	Period
Argentinosaurus	35,00	Late Cretaceous
Supersaurus	35,00	Early Cretaceous
Brachiosaurus	30,00	Late Jurassic
Paralititan	28,00	Late Cretaceous
Diplodocus	26,00	Late Jurassic
Pelorosaurus	25,00	Early Cretaceous
Barosaurus	24,00	Late Jurassic
Ligabuesaurus	24,00	Early Cretaceous
Camarasaurus	23,00	Late Jurassic
Chubutisaurus	23,00	Early Cretaceous
Giraffatitan	23,00	Late Jurassic
Quaesitosaurus	23,00	Late Cretaceous
Mamenchisaurus	22,00	Late Jurassic
Haplocanthosaurus	21,50	Late Jurassic
Alamosaurus	21,00	Late Cretaceous
Apatosaurus	21,00	Late Jurassic
Jobaria	21,00	Early Cretaceous
Dicraeosaurus	20,00	Late Jurassic
Janenschia	20,00	Late Jurassic
Omeisaurus	20,00	Mid Jurassic

📌 Dataset Note

This analysis is based on a dataset containing **309 dinosaur species records**, representing approximately **30% of the total species discovered to date**. Although it does not include all known dinosaurs, this sample is still **statistically significant**, allowing us to identify key trends in the **distribution, characteristics, and evolution of dinosaurs** across different geological periods and regions of the world.

📌 Data Source:

The data was extracted from the Natural History [Natural History Museum - Discover](#) 🌎🦖.

📌 Download the dataset and Power BI file here:
